

## meteorwave

### 1000, 2000, 3000, 4000 & 8000

### Very Low to Extremely Low Loss Materials

### Laminate & Prepreg

*The Meteorwave family of materials offer very advanced electrical performance and very high reliability. They are intended for use in next generation core routers, high speed switches, supercomputers and applications where low signal attenuation, high reliability and high data transfer rates are critical. Meteorwave products are designed to facilitate high temperature lead-free assemblies and high layer count printed circuit board designs that require high reliability, CAF resistance and low Z-axis expansion.*

#### Key Features

##### Excellent Electrical Properties

- Low Dk
- Very low loss and ultra low loss Df electrical performance
- Stable electrical properties versus frequency when tested over various environmental conditions

##### Lead-Free Compatibility

- Designed to withstand multiple lead-free assembly reflow cycles at 260°C

##### Highly CAF Resistant

- CAF resistant materials after high temperature reflow

##### Thermal and Mechanical Properties

- Very low Z-axis expansion for high reliability
- Good peel strength
- Excellent IST performance
- Meets NASA outgassing specification

##### High-Tg FR-4 Processing

- Processing similar to other high-Tg materials
- 30 min press at 177°C plus 60 min press at 216°C and 390 psi

##### Available in a variety of constructions

- Available in a wide variety of constructions, copper weights and glass styles, including ultra low profile copper, standard copper and RTFOIL®
- Available as 2 mil core products that meet the specifications of a capacitive laminate
- A rating of UL 94V-0 and 130°C MOT for the entire Meteorwave family of materials
- Meets IPC-4101/102 specification
- All of AGC Nelco's PCB materials are RoHS compliant

#### Applications

- 25 - 100 GHz Infrastructure
- Cloud Storage
- Core Routers
- High Speed Switches
- Servers
- Supercomputers
- RF/Microwave Applications
- 5G
